The goal of the American Sheep Industry Association (ASI) and the U.S. sheep industry is to eradicate scrapie from our borders. In addition, it is the objective to have the World Organization for Animal Health, OIE, declare the United States scrapie free by 2017. This quarterly publication is created specifically for those of you in the field who are also working to achieve this goal.

This newsletter brings together, into one spot, current information from all 50 states, as well as from the U.S. Department of Agriculture and any other organization providing scrapie news, and reports it back to the field.

If you have first-hand accounts that you believe would be relevant for others to read or have information that you would like included in this newsletter, please let us know at becky@sheepusa.org.

Scrapie Confirmed Cases in 2008

Scrapie Cases as of August 31, 2008 = 164
126 field cases, including 5 goats*; 38 RSSS cases (Reported by State of ID tag. Collected in October-August and reported by Sept. 18, 2008. 4 cases--state of ID unknown, 1 Nor98-like case**.)

Scrapie Brochure Developed to Promote Youth Involvement

As many youth in the United States raise sheep, many for 4-H or FFA projects, it is crucial for them to understand their role in scrapie eradication.

Because of this, a youth-specific brochure was developed by the American Sheep Industry Association to explain scrapie, the National Scrapie Eradication Program and how youth can comply with the program. This brochure will be first offered to sheep-interested youth at the 81st National FFA Convention in Indianapolis, Ind., October 22-25.

in the fight
The fawn is a species of deer native to North America. They are typically found in forests, woodlands, and grasslands. Fawns are known for their spotted coat and they are easily recognizable by their bounding gait and small, rounded ears. They are herbivores and primarily feed on grass, leaves, and fruits. Fawns are very social and are often found in groups with their family members. They are also known for their ability to camouflage themselves in their natural habitat. Fawns are born with a light coat of fur and are referred to as a "fawn" for the first year of their life. After one year, they are referred to as a "deer".

How can I protect my field or farm animals?

- Keep your farm animals in a secure enclosure.
- Use fences to prevent predators from entering your farm.
- Provide your animals with proper shelter and food.
- Keep your farm animals in a clean and healthy environment.
- Keep your farm animals healthy by providing them with proper vaccinations and medical care.

Animals Sampled for Scrapie Testing
Sheep and Goats
As of August 31, 2008

44,640 animals have been sampled for scrapie testing: 40,411 RSSS; 1,517 goats for the CSPS study; 2,171 regulatory field cases; 282 regulatory third eyelid biopsies; and 259 regulatory rectal biopsies.

Infected and Source Flocks New Statuses by Year
FY 1997 – 2008*

Released Scrapie Infected and Source Flocks
FY 2008

55 flocks released as of August 31, 2008
Scrapie Flock Certification Program
Participating Flocks

As of August 31, 2008

Total Enrolled Flocks—2,002
Complete Monitored—1,471
Certified—504
Export Monitored—23
Selective Monitored—4

SFCP Flocks Enrolled and Certified in August 2008

Complete Monitored = 7
Certified = 1
Export Monitored = 2*
The Animal and Plant Health Inspection Service’s goal is to collect 4,000 slaughter surveillance samples each month from around the United States.
